### Uncovering Business Events

Business feeds are the result of operational events that have been correlated and aggregated, and are often the result of business rules. For example, a CFO might be interested in events when a department issues purchase orders (POs) that exceed a \$50,000 weekly threshold. But the sources of those POs could be three different systems – SAP, JD Edwards, and a homegrown iSeries application. The CFO is interested in the aggregation of the POs raised within the last seven days across these systems.

Collaboration platforms require real-time feeds of business events and some bidirectional workflow processing so that actions from the platform can initiate or update transactions on the ERP application. The CFO might want to deny approval or raise an exception on certain purchase orders that are in the group of POs that have an aggregate value greater than \$50,000.

With iWay CEP Enable, organizations can build comprehensive environments that immediately uncover and alert stakeholders to critical operational events, such as breakdowns, inefficiencies in core business activities, or technical problems that may negatively impact the execution of automated processes. Interaction and communication on how to correct those issues can then be effectively facilitated directly through the collaboration environment.

iWay CEP Enable uses iWay adapters for event capture and can therefore support more than 400 different event sources, including systems such as the Oracle e-Business Suite, SAP, JD Edwards, and Lawson CRM systems.
